L&R’s Early Classic flint lock .................. #Lock-LR-2150 and 2185
L&R’s Early Classic flint lock has no pan bridle to support the frizzen. Instead, it uses an early style shouldered frizzen pivot screw. Yet, it has an advanced frizzen roller. A bit larger than the Siler, this plate allows a tight fit in most pre-inlet stocks. A thicker bolster allows wide panels, but may be thinned to fit a pre-inlet stock’s Siler mortise.

L&R’s new fly and frizzen design are used on this lock. The fancy sculptured frizzen spring mounts with an inside screw.
The tumbler has a mainspring cam, to speed lock time. Raised bearings on the tumbler and sear minimize friction. Better cock geometry put sparks squarely in the pan. A short travel causes the cock to strike sooner. L&R’s “one position” sear returns to the same angle whether un-cocked, half-cocked or full-cocked.

Challenging the Siler lock, L&R’s Early Classic lock has the “Germanic” look of the 1750-1770 era. A matching flint lock with pan bridle, and a percussion “conversion” lock are also available. The tumbler has a mainspring cam, to speed lock time. Raised bearings on the tumbler and sear minimize friction. Better cock geometry put sparks squarely in the pan.
