“Durs Egg” percussion lock, right or left hand:

Identical to our Durs Egg flint lock, except percussion. Order our 7/16” diameter drum, #Drum-7-5-FL, and an RST S 1/4-28 nipple.

When making a gun with interchangeable flint and percussion locks, fit the percussion lock first. Drum location is critical. It must fit the plate notch, and must be supported when the hammer falls.

The drum must turn in to the correct nipple angle, then stop. This is easily accomplished with the above drum and our #Tool-Drum drum drilling jig. No file fitting will be needed.

Powder Drum, correct antique style, with no drum screw:

Powder Drum, correct antique style, with no drum screw:

Parts for L&R’s “Durs Egg” percussion, right...... #Lock-LR-1500

Parts for L&R’s “Durs Egg” percussion, left ......... #Lock-LR-3500

L&R’s John Bailes conversion cap lock, right or left hand:

Sometimes called the small Manton lock, fine original flint locks were converted to percussion during the 1825 to 1880 period. The flash hole was replaced with a powder drum and nipple, which we offer separately. Old time gunsmiths cut away the pan, discarded the frizzen, frizzen spring, and cock. A new hammer was added, and screws were peened over and filed away to fill the old holes in the plate.

This new lock avoids those problems. Simply interchange this percussion conversion John Bailes lock in your Flint lock mortise. Order our #Drum-7-5-FL and #RST-S stainless 1/4-28 nipple.
