Flint 1" or 1-1/16" Fowler Hooked Breech ...................... #Plug-(specify)

This English style tang is wax cast of malleable 8620 steel. It may be straightened, or bent cold. Each plug has been X-ray inspected for internal flaws before threading. Made in 3/4-16 and the big 7/8-14 thread size for use in 10 or 12 gauge fowling guns, 1-1/8" octagon at the breech. You may use this plug with either a right or left hand flint or percussion lock.

The English tang only is 2-1/4", the width mid-point of the tang is 9/16". The groove at the top of the tang resembles those found on British Officer's fusils, and some pre-Revolutionary War era fowling guns. The American tang is 4-1/2" long, 3/8" wide at the narrow end and 1/2" wide at the mid-point of the tang.

Note that N. M. L. R. A. rules for the N. W. Trade Gun Match do not allow a rear sight above the plane of the barrel. You may finish the tang to be even with the top of the barrel, and extend the groove by filing into the top surface of the barrel, to match the tang, using a round file.

The small lug at the bottom of the tang is a pin lug to secure the tang to the stock. This is a small detail found on better English fowlers, and can be easily removed if desired.

This plug is ideal for use with our 42" octagon-to-round smoothbore or rifled barrels with 3/4-16 threads.

American or English Fowler 1-1/8" Hooked Breech ...................... #Plug-(specify)

Both the American and English style breech plugs are wax cast of malleable steel. They can be gently straightened, or bent cold. Each plug has been X-ray inspected for internal flaws before threading. Made in 3/4-16 and the big 7/8-14 thread size for use in 10 or 12 gauge fowling guns, 1-1/8" octagon at the breech. You may use this plug with either a right or left hand flint or percussion lock.

The English tang only is 2-1/4", the width mid-point of the tang is 9/16". The groove at the top of the tang resembles those found on British Officer's fusils, and some pre-Revolutionary War era fowling guns. The American tang is 4-1/2" long, 3/8" wide at the narrow end and 1/2" wide at the mid-point of the tang.

Note that N. M. L. R. A. rules for the N. W. Trade Gun Match do not allow a rear sight above the plane of the barrel. You may finish the tang to be even with the top of the barrel, and extend the groove by filing into the top surface of the barrel, to match the tang, using a round file.

This same threaded plug is also used on both the English and American Fowler hooked breech Select our 3/4-16 thread for 20 gauge and smaller bores, or our big 7/8-14 thread for larger bores, including 12 and 10 gauge.

American fowler plug and tang set for 1-1/8" barrels:
