

Gunmaker's tip:

When mounting a sling swivel to a triggerguard, be certain that the guard will support the load. Pins must be securely anchored, or a tang bolt may enter a blind hole in the triggerguard boss, for strong support from above.

Made in the U.S.A.

Triggerguard, wax cast brass or steel#TG-Early-1-B or I

Made for our *Edward Marshall* fully inlet precarved stock, it may have originally been made by the Albrecht's of Christian's Spring, Pennsylvania. This triggerguard has a front and rear boss for screw mounting. Ideal for a Jaeger or early transitional longrifle. The inside curl may be completely removed, for use with our early style #TR-Jaeger double set trigger with straight rear trigger.

| #TG-Early-1-B | triggerguard, wax cast brass | only \$33.99 |
| #TG-Early-1-I | triggerguard, wax cast steel | only \$24.99 |

Triggerguard, wax cast brass or steel#TG-Early-2-B or I

This early longrifle triggerguard has features more typically found on classic American longrifles. Notice the chamfered flats on the front and rear finials. These octagon flats echo the shape of the barrel. Easy and effective, octagon decorations displaced elaborate finials on American guns. Floral finials remained popular in continental Europe. English finials evolved from shells, to acorns, to pineapples.

Called the North Hampton style guard, it is similar in shape to those used on early Allentown-Bethlehem and Lehigh County rifles.

| #TG-Early-2-B | triggerguard, wax cast brass | only \$33.99 |
| #TG-Early-2-I | triggerguard, wax cast steel | only \$25.99 |

Gunmaker's tip:

The thick web at the front of the triggerguard bow was functional during this period, allowing the gunmaker to optionally mount a sling swivel to a hole cross-drilled through this web.

We can provide a proper sling swivel, with mounting screw, or a sling button stud to mount two inches behind the guard, if you prefer. See our many sling swivels, shown elsewhere.
