Triggerguard, sand cast brass or nickel silver ........ #TG-SPW-G-B or S
A classic plains rifle triggerguard in a style often used by the famous
Horace E. Dimick of Saint Louis. The large bow will accept double set triggers,
a standard feature of the 1840-1880 period rifle. Very malleable, the grip rail
can be annealed and bent to match your half-stock rifle’s profile.
#TG-SPW-G-B triggerguard, sand cast brass only $13.99
#TG-SPW-G-S triggerguard, sand cast nickel silver only $14.99

Gunmaker’s Tip:
Longer cast parts, such as triggerguards, tend to bend slightly during
manufacturing and shipping. Made of malleable metal, they must be
straightened before use. Sight down the casting’s length to observe any bend
or twist. Anneal the brass by heating it to a dull red, then allow it to air cool.
Camp one end in a padded vise, and gently correct any twist, then
straighten any bend. Plan your corrections, and make each change in
one attempt. Repeated flexing will eventually cause cracks. Make bends
cold, to your satisfaction, before you begin work. Return or exchange any
unsatisfactory part before you polish it. Postage is your only risk.

Triggerguard, wax cast brass or steel ..................... #TG-Dimick-B or I
Typical of the grip-rail guards used by H. E. Dimick of St. Louis, and other
Hawken competitors who built Plains rifles during the 1840 - 1870 westward
expansion period. This wax casting is easily polished. The design is based
on an English Sporting Rifle style triggerguard. Use a short bar Kentucky rifle
style double set trigger, or remove front and rear tabs to attach this guard to
a long Hawken style triggerplate.
#TG-Dimick-B triggerguard, wax cast brass only $33.99
#TG-Dimick-I triggerguard, wax cast steel only $22.99
