Flint knapping Hammer and Vent Picks shown actual size

Wooden Loading Blocks, for hunters ......................... #Block-(caliber)
These miniature “bread boards” shaped accessories are made from hard-wood, drilled to hold lubricated patched round balls. Before hunting, grease your patch, center it over a hole, and press the ball into the hole and force it into the hole, using a short starter. Push it until the ball protrudes below. This protruding bulge can be quickly centered on the muzzle, and patched ball rammed home with the starter. These sizes can easily be enlarged to fit odd calibers by reaming the hole with sandpaper around a slotted dowel. Specify .32, .36, .40, .45, .50, .54, .56, .62 or .69 caliber.
#Block-(caliber) wooden loading block only $ 4.75

#Block-(32-69) Wooden Loading Block $4.75
