**Wood Stain, Sealer & Finish**

**Original Oil Finish, our slow curing favorite.**
Our high quality oil base finish uses natural authentic ingredients, thiners, and volatiles to improve hardening and speed drying slightly. This is an honest oil finish, not a varnish. Minor scratches from field use will disappear with repeated applications. Slow acting, slow curing, it requires several coats, rubbed by hand, over several days. No synthetics. One of our favorites, because it is so easy to get good results, over time.

**Gun Stock Sealer & Filler, by Birchwood Casey.**
Sealer and Filler seals out moisture and fills the pores in one easy step. Use our clear sealer and filler after your favorite stain or seal the wood in its natural color. Penetrates grain quickly, easy to use, dries fast. Made in the U.S.A. by Birchwood Casey. Sealer & Filler, clear, 2-1/2 oz. only $5.29

**Gun Stock Wax, by Birchwood Casey.**
Heavy duty weather protection for your gun. It produces a lustreous waterproof final coating, combining the beautifying properties of carnauba wax, beeswax, and silicone compounds. Liquid wax, 2-1/2 fluid oz only $5.99

**Tru-Oil® Gun Stock Finish.**
Birchwood Casey’s famous fast drying Linseed oil varnish. Dries quickly, allowing you to apply several coats, until a satisfactory finish is achieved. Tru-Oil® has been used by gunsmiths for over 20 years. It dries to a high shine. Polish the gloss with a rubbing compound for a satin finish.

**Metal Finishing**

**Plum Brown® Barrel Finish by Birchwood Casey.**
This famous “hot brown” formula quickly produces rich authentic chocolate brown finish on steel. We use it in our shop, for touch-up, repairs, and small parts. Large surfaces (barrels) require thorough cleaning to achieve an even finish. Despite instructions, allow the brown finish to age several hours before oiling, giving the oxide time to bond to the surface. Inspect it in bright daylight. If mottled, continue application. After-rust, which may darken the finish, is normal. Poison! Avoid contact with skin.

**Van’s Gun Blue.**
A new blue process, in easy to use liquid form. Just rub it on. The more you rub, the darker it gets. An exotic Selenium compound, even a beginner will like the results. Blue and Rust Remover won’t touch this finish, since it is not an iron oxide. It is durable, and easy to use. Used as a “touch up” blue, because it reacts only with shiny steel. It will not wet or discolor blued steel. Great for touching up scratches, screws, and sights.

**Blue and Rust Remover, by Birchwood Casey.**
Cold chemical compound removes old blue, brown, and surface rust. Wash that corrosive black powder fouling from your patch knife, or you’ll need a lot of this stuff. Easy to use, a thick liquid.

**Super Blue-Liquid, by Birchwood Casey.**
An old formula liquid gun blue, in “gunsmith strength”, for quick touch-up use. Use this on steel parts, screws, repairs, sight slots, etc. Easy to use. Be sure to order degreasing agent, and use it to prepare the surface before any blueing or browning effort.
